

Prof. S. K. Mishra, MS, DNB, FACS
Founder & Head of the Department

Message

Surgical disorders of Breast are quite common and many of them needs specialized care involving specialist across the medical disciplines. Breast wellness and preventive aspects needs community based interventions. Breast diseases also attracted many basic and clinical researchers to focus on fundamental and applied clinical research. Health systems across the world have identified Breast Health as a public health issue and invest considerable budget in developing dedicated programmes in specialty hospitals integrating with community health initiatives. The department of Endocrine Surgery since it's inception on 7th September 1989 has incorporated breast care in it's scope of activities and has identified it as a thrust area with dedicated faculty in the year 1999. Rapid influx of information emanating from enormous publications in the field of Breast diseases make one difficult to assimilate and acquire the knowledge. Besides the general practitioners, gynaecologists at times look for information to guide their patients in their day to day encounter with the symptoms relating to Breast problems. In that context such kind of educational programmes delivered through theme based courses are of immense importance.

We hope, the participants will find the course beneficial to update their knowledge and skills in the specialty of breast surgery besides enjoying their brief visit to Lucknow city.

Sang K Mishra
(Prof. S.K. Mishra)
